

Haider Ali

Software Engineering Student | Aspiring SQE / SRE

📞 +92 320 4518054 ✉️ haiderrajpoott69@gmail.com 📍 Lahore, Pakistan

PROFESSIONAL SUMMARY

Software Engineering undergraduate (6th semester) with a strong foundation in Object-Oriented Programming, Data Structures & Algorithms, and Database Management Systems. Hands-on experience designing SRS documents, UML diagrams, and applying software testing/quality assurance principles. Familiar with machine learning fundamentals and basic MERN stack development. Seeking a Software Quality Engineer (SQE) / Site Reliability Engineer (SRE) internship to apply strong analytical and problem-solving skills in a real-world engineering environment.

EDUCATION

Bachelor of Science in Software Engineering

Lahore Garrison University, Lahore

2023 – 2027 (Ongoing, 6th Semester)

TECHNICAL SKILLS

Languages	C++, Python, JavaScript, SQL
Concepts	OOP, Data Structures & Algorithms, DBMS, Machine Learning Fundamentals, UML Diagramming, Software Requirements Specification (SRS)
Testing/QA	Manual Testing, Test Case Design, Test Plans, Boundary Value & Edge Case Analysis, Bug Reporting, API Testing (Postman), Requirements Traceability
Web (Basics)	React.js, Node.js, Express.js, MongoDB
Databases	SQL Server, MongoDB
Tools	Git, GitHub, VS Code, MS Visio / draw.io, Postman, MS Office

PROJECTS

Student Result Management System / C++, OOP, DSA | 3rd Semester Project

- Built a console-based system to manage student records, grades, and result computation using core OOP principles.
- Implemented custom data structures (linked lists, arrays) for efficient record storage and retrieval.
- Designed and executed manual test cases covering boundary values and invalid inputs; logged and fixed bugs found during testing.

Toll Plaza Management Database / SQL Server, DBMS | DBMS Semester Project

- Designed a relational database schema for toll plaza operations, including vehicle logs, toll rates, and transaction history.
- Wrote complex SQL queries, stored procedures, and triggers; applied normalization for data integrity.
- Validated data integrity constraints and query outputs through structured test scenarios covering duplicate entries, null values, and concurrent transactions.

ML-Based Prediction Models / Python, Scikit-learn | Machine Learning Project

- Implemented and compared Logistic Regression and Linear Regression models for classification and prediction tasks.
- Applied K-Nearest Neighbors (KNN) and Decision Tree algorithms; evaluated models using accuracy, precision, and confusion matrices.

SRS Documentation, UML Modeling & Functional Testing / Software Engineering Coursework

- Authored a complete Software Requirements Specification (SRS) document for a university-assigned system, covering functional and non-functional requirements.
- Designed UML diagrams (Use Case, Class, Sequence, Activity) to model system behavior and structure prior to implementation.
- Created a full test case suite mapped to requirements and executed functional testing to verify compliance; documented defects and retested after fixes.

SOFT SKILLS

Analytical Thinking
Attention to Detail

Team Collaboration
Time Management

Documentation Skills
Problem Solving
